

Non-Functional Requirements

1. Performance

NFR-01

The system shall support multiple users accessing the system simultaneously without significant performance degradation.

NFR-02

The system shall process reservation or order transactions within 2 seconds under normal operating conditions.

NFR-03

The system shall be able to handle at least 100 concurrent reservation or order requests.

2. Reliability and Availability

NFR-04

The system shall operate with a minimum uptime of 99% during business operating hours.

NFR-05

The system shall automatically recover data after system failure using backup mechanisms.

NFR-06

The system shall prevent data loss during normal operations.

3. Security

NFR-07

The system shall require user authentication before granting access.

NFR-08

The system shall restrict access to system features based on user roles and permissions.

NFR-09

The system shall protect sensitive data such as financial records and reservation information.

NFR-10

The system shall log system access and important operations for security auditing.

4. Usability

NFR-11

The system shall provide a user-friendly interface that can be easily used by restaurant staff and administrators.

NFR-12

The system interface shall allow users to complete common tasks (such as recording orders or reservations) in minimal steps.

NFR-13

The system shall provide clear feedback messages for user actions such as successful transactions or errors.

5. Scalability

NFR-14

The system shall be designed to support future expansion of the agritourism business.

NFR-15

The system architecture shall allow the addition of new modules such as farm management or online reservations.

6. Maintainability

NFR-16

The system shall be structured using modular design principles to simplify updates and maintenance.

NFR-17

The system shall include clear documentation to support future development and debugging.

7. Compatibility

NFR-18

The system shall be compatible with modern web browsers and desktop environments.

NFR-19

The system shall support integration with external systems such as online booking platforms if required.

8. Data Management

NFR-20

The system shall store data in a structured database.

NFR-21

The system shall maintain backups of important operational data.

NFR-22

The system shall ensure data consistency across all modules of the system.
